

Door Entry

Valcom's door entry system enables you to have the extra security you need for your organization. With a push of a button, your visitor initiates a two-way communication from the doorplate intercom to the telephone by simply pushing a button. Once the visitor is identified, you are able to dial a code on the phone to unlock the door. The door entry system is for anywhere you need to control access to your facility.

Gives you two-way communication to identify your visitors.
