

Paging Interface

Valcom's V-9972 Universal Paging Interface is designed to provide access to paging systems from analog trunk or station inputs (FXO/FXS) and Session initiation Protocol (SIP) voice over IP connections either through an on-premise PBX or Cloud PBX input. When paired with SIP connections the V-9972 supports Valcom handsfree page units for talkback paging and up to 150 Valcom one-way amplified speakers. The V-9972 connects multiple units for multi-zone paging.
