

Input/Output Module

Valcom's InformaCast® IP Input/Output Module allows operation of eight (8) contact closures which are software programmable as either Form A or Form B. Eight (8) contact closure activated inputs provide for various programmable relay functions. The Input/Output Module allows initiation of Application Server events over an IP based LAN/WAN.

Multiple devices can easily be connected and controlled via schedules or during emergencies including, but not limited to the following:

- Panic buttons
- Door/gate control
- Turn on/off lights
- Trigger cameras
- Initiate messages
- Gunshots detectors
- Disable elevators
- Turn off heating/air

Easily control and monitor virtually any type 3rd party system and device.
