# ENCOMPASS MULTIMODAL™

## Simultaneous Messages to Multiple Media... ...With a Single Click.

### Exploit All Existing Communication Tools

A Valcom Encompass™ Voice Notification System solves the fundamental need to deliver a voice emergency message to everyone on campus instantly.

However, there are less critical situations when a message is not as time sensitive or where many of the intended recipients are off campus. Example: "The National Weather Service is forecasting a blizzard tomorrow. All classes and activities are canceled for tomorrow".

Valcom Encompass Multimodal™ utilizes your existing communication tools to deliver messages via telephone, voicemail, email, instant text messaging, beepers, cell phones, radios, digital signage, etc. The problem is knowing which is the best way to reach someone. And if there is more than one way, you must deliver a separate message via each mode of communication. Encompass Multimodal™ remembers the best ways to reach each person and sends messages accordingly...and simultaneously. Encompass Multimodal™ allows you to send live or prerecorded messages to any group or all persons via whatever communication modes you choose or all modes depending on the nature of each individual message.

### Create and Edit Unlimited Messages...

...and send them with one click or on a timed schedule by day, week or month. Store messages in folders such as Lockdown or Weather Emergencies. Program a message to repeat until acknowledged or escalate if not answered.

### Store and Sort Staff Directories

Display staff directories by first name, last name, department or group. Change the display with one click. Store information about location and preferences.

### ADA Compliance

Because Encompass Multimodal™ delivers both audible and visual messages simultaneously, ADA compliance is easy and inexpensive.

### Direct Messages by Location

View a graphic of your facility by floor or building. Direct a message to a department, floor, group of floors, building, group of buildings or all buildings simultaneously. Text-to-Speech Translation delivers messages both audibly and visually to all media within the area selected – loudspeakers, wall displays, PC screens.

### Log Activity...and Responses

Encompass Multimodal™ logs all activity so it's easy to see when, where, to whom and by whom a message was sent. It also logs replies so you can see how quickly your staff has responded.

### Opportunities for Enhancement

Encompass Multimodal not only empowers your existing communication systems, but provides the infrastructure for new ones.
