Valcom Paging Tips

Valcom's Digital Line of Power Supplies provide low operating energy costs

Valcom [digital power supplies](#) provide low energy consumption under full load due to advanced digital circuitry and provide low temperature operation resulting in long life service under continual use. Power Supplies are mounted in remote IDF closets to power Valcom amplified speakers as required. The [VP-6124 \(6AMP\)](#) has provisions for full Battery Back-Up operation by using the [VP-6124UPS](#) and [VBB-6124 Battery Box](#).

Adding Valcom to every PBX sale adds features that enhance every system

A Valcom loudspeaker paging system included with every PBX sale adds features and functions that provide a total communication solution. Talkback horns in a warehouse improve customer service, background music in manufacturing increases workforce productivity and speakers in key public areas provide employees with safety during emergency situations that require notification of key directives. Visit [Valcom Customer Solutions](#) to see added features offered with a Valcom paging system.

Free project layout and assistance with large/complex projects

Valcom offers free layout assistance with large or complex paging projects. Send project prints and specifications to Valcom for assistance with layout.

Please include with each project, a Valcom Project Request form available at <http://www.valcom.com>. Please allow 7-10 business day turn around.
