Introducing Valcom's NEW In-Wall Mixer and Hi-Fidelity Speakers!

Sleek and contemporary in design, Valcom's new [In-Wall Mixer](#), blends with today's modern décor and is ideal for:

- [Conference Rooms](#)
- [Meeting Rooms](#)
- [Gymnasiums](#)
- [Sports Complexes](#)
- [Auditoriums](#)
- [Lecture Halls](#)
- [Institutional Cafeterias](#)
- [Restaurants](#)

Each mixer provides two auxiliary inputs and one balanced microphone input. Auxiliary inputs can be used for music or program sources, PC audio, or wireless microphone. An additional audio input (building page) easily adapts the in-room speakers to the building's existing paging system. An override feature allows emergency announcements priority over individual room activities. The In-Wall Mixer is available in a 3-gang electrical box configuration or available with a remote input module and mounts in a 4-gang electrical box.

Additional Remote Input Modules may be connected to the In-Wall Mixer providing one (1) Balanced Microphone with Programmable Phantom Power and one (1) auxiliary input. Three (3) Remote Input Modules can be added to each In-Wall Mixer for additional inputs. A master volume control, bass and treble controls make sound level adjustments a breeze! Other features include:

- LED signal meter provides instant visual indication of audio signal levels
- Full frequency range output for speakers and modified output for horn loads.
- Built in compressor (option switch controlled) evens out quiet and loud inputs.
- White decor faceplate included

Valcom's High Fidelity Speakers offer excellent voice and music quality sound and are the ideal enhancement to complete your Valcom In-Wall Mixer system installations.
