

PR Release - for immediate release

Valcom Expands IP Loudspeaker Paging Systems Line

Roanoke, VA March 1, 2007 - Valcom expands PagePro IP™ Loudspeaker Paging System offering with new product releases to be introduced in Orlando, Florida at two venues in March: VoiceCon Spring 2007 Conference, March 5 – 7, Booth #1205 and NSCA Expo, March 15 – 17, Booth #1815.

Valcom introduces new and stylish PoE IP Loudspeakers that are available with or without synchronized clocks.

Overcoming traditional loop length limitations, Valcom's new IP Loudspeaker Paging Horn with line length extender provides IP functionality with the ability to locate paging horns up to 400 meters from the closest switch. New paging servers interface directly with Cisco, Avaya, Nortel, Iwatsu and other standards compliant IP telephone systems. The new paging servers can support up to 65,000 speakers. Features include zone paging, group paging, all-call paging, built-in feedback eliminator, talkback options and security monitoring features.

Valcom, the originator and leader in PoE IP Loudspeaker Paging Systems, maintains engineering and manufacturing facilities in Roanoke, VA, USA.

For more information on Valcom's IP Loudspeaker Paging Systems, contact Valcom, Inc., 5614 Hollins Road, Roanoke, VA 24019; 540-563-2000; FAX: 540-362-9800; e-mail: is@valcom.com or visit www.pageproip.com
