

# V-Alert Pro™

## Launch from your mobile app

**V-Alert Pro™** works with Valcom's notification solutions to activate a scenario directly from the user's phone. Examples of these scenarios can include lockdown, evacuate, shelter in place and other critical information.

**V-Alert Pro™** allows mobile notifications from Valcom Software Solutions such as VEMASS and IP6000. V-Alert also integrates with other 3rd party emergency notification platforms providing one seamless notification solution.

## Partner with Love

Valcom is a mission partner with [i love you guys.org](http://i love you guys.org), two enterprises that bring strong mission alignment to the relationship. Together we're a powerful conduit that unites.

 **Evacuate**  
To the Announced Location

 **Shelter**  
Stating Hazard and Safety Strategy

 **Reunify**

Examples shown are i love you guys.org's suggestions. We recommend that you consult with your security team to determine the appropriate colors and protocol messaging.

**Maximize** your resources and empower your organization to streamline emergency notifications. V-Alert deploys with one-click simplicity.

**Faster** more **reliable** digital path than text messaging and email.

**Unlimited** use and message capability allows you to send up to 1000-character count notifications, so you are sending one cohesive message as often as you want with no fees.

**Remotely access** files in various formats including PDFs, JPGs, word documents and others for evacuation procedure and emergency plans.

Easy to install, V-Alert is available in both Apple App Store® and the Google Play Store® and easily installs onto the users iOS or Android devices.

**Unlimited** channels and various user types for predefined groups and individual of users.

## Geo FENCING

**Quickly identify and set a virtual perimeter that alerts individuals within an area.**

V-Alert now enables you to set a virtual perimeter around an area within your organization. Geo-Location gives you the ability to notify in a geo-fenced location. The geo-fenced location can be combined with channel locations to target a specific location.

V-Alert Geo-fenced locations that are tagged in a channel automatically set the perimeter around the geo-tagged channel so now anyone within the virtual perimeter receives the alert.
