

Our manufacturing facility operates around the clock, and maintaining a schedule is crucial.

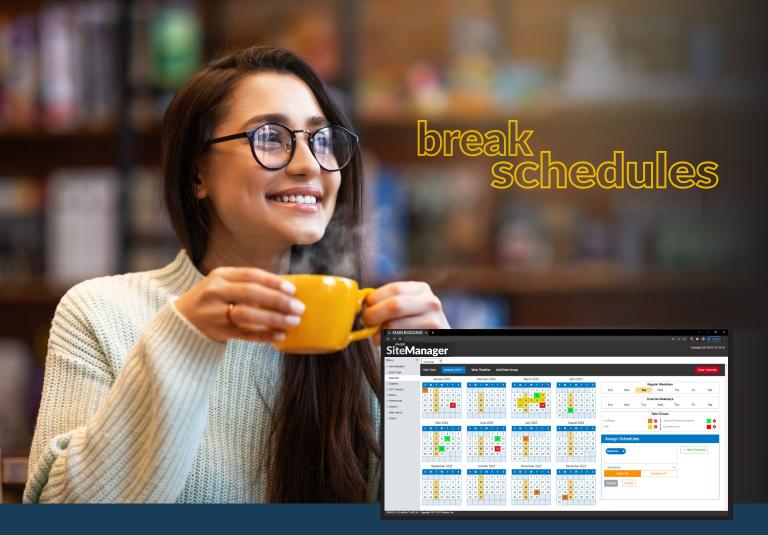

Coordinating tasks among employees can be challenging.

To keep everyone on track, Valcom Clock Systems offer a precise time standard to synchronize organizational activities.

Companies with extensive commercial or industrial facilities efficiently manage shared resources by implementing staggered shift and break times.

Valcom provides a range of bell scheduler solutions that automatically signal shift changes and break times using audio, tones, bell sounds, or customized messages based on the time of day and day of the week.

In the event of a dangerous chemical leak, swift evacuation is our top priority.

During a crisis, panic can cloud your judgment and make it difficult to think clearly. Having strategically placed panic buttons can help by providing one-push access to emergency personnel and initiating a pre-planned evacuation sequence. In addition, messaging to LED signs, horns, VoIP phones, smartphones, automatic door release, and parking lot gate control can further alleviate stress during emergencies such as chemical spills, fires and weather events.

To keep track of deliveries and visitors, it's essential to know when they arrive at our loading dock or other secure entrances.

Fortunately, with the Valcom door intercom systems, visitors can quickly alert personnel with just the press of a button. Granting them access is also a breeze - it can be done with a simple phone call and dialing a single digit.

Our processing plant is cleaned with high-pressure water after each shift.

We have incurred frequent damage to our speakers as a result...

How can we fix this problem?

Valcom's FlexHorns[™] are explicitly designed for areas that require regular wash-downs, such as food processing plants.

As our production line runs continuously, we require a hassle-free method of ordering supplies from the stockroom. Could you suggest a convenient solution?

One potential option could be Valcom's Intercom Call Stations providing one-press access to relevant departments.

At our production facility, we make several standard announcements every day. However, some individuals speak too fast or unclearly, making it challenging to comprehend the message.

Is there any way Valcom

can assist us?

With the help of our Emergency
Communications Panel, you can
quickly initiate pre-recorded messages
that are categorized and consistent. These
messages can be transmitted to speakers,
horns, or LED signs with just one touch.

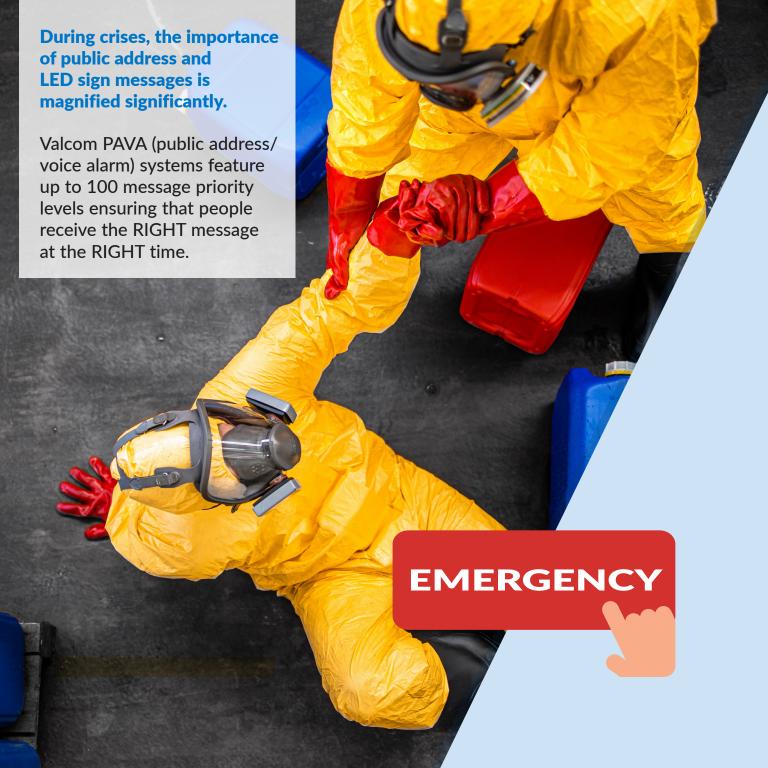

Our processes occur in a cleanroom where speakers with paper cones cannot be used.

Valcom's Cleanroom Speaker is a ceiling speaker capable of producing voice paging in cleanroom environments. The Cleanroom Speaker is designed with a polycarbonate dust shield that prevents contamination where airborne particles must be controlled. Businesses such as pharmaceuticals, laboratories, medical facilities, and other critical manufacturing environments can benefit from Valcom's Cleanroom Speakers.

OUR STORY

Valcom firmly believes that communication is essential for any organization's survival. We aim to provide accurate and timely information to keep individuals informed, safe, and on track.

Our extensive experience and innovation in the field of communication have helped us address even the most complex concerns of our clients. Our products are designed to deliver every day and emergency information effectively and precisely. Valcom offers tailored solutions that cater to your organization's needs, ranging from simple voice paging to expansive mass notification systems. Thousands of businesses, government agencies, school districts, college campuses, and transportation hubs worldwide utilize our products and software technology.

For over 45 years, we have been dedicated to listening to our customers' feedback and delivering products that surpass their expectations, driving our industry forward.
