

# Transformers

Valcom's Input/Line Transformer is designed to match inputs from or outputs to a 600-ohm line. Used as an input-matching transformer, it connects telephone systems to most public address amplifiers that are used for telephone paging.

Valcom's Audio Isolation Transformer may be used for magnetically coupling line level audio. Common uses include isolating ground references from one audio circuit to another.

## Features & Advantages

Input Line Matching Transformer ..... VMT-1  
Audio Isolation Transformer ..... VMT-2

### **Input Line Matching Transformer**

#### **Output Matching**

*Feed program material (like music on hold) over 600 ohm phone line.*

#### **Matches High-to-Low or Low-to-High Impedance**

*Ensures sound quality regardless of input type.*

### **Audio Isolation Transformer**

#### **Isolating Ground References from One Circuit to Another**

*Eliminates noise.*
