

SoundMasking™ Speaker

Valcom's V-9422 Lay-In 2x2 Spot SoundMasking™ speaker creates a protective curtain of sound that masks conversations that might otherwise be easily overheard. Our Spot SoundMasking speaker is an affordable solution for healthcare facilities, government agencies, financial institutions, clergy, counselors, human resources, and attorneys.

The speaker is easy to install and functions as both the sound source and the amplifier, eliminating the need for additional equipment. Because the Spot SoundMasking speaker operates independently from your overall communication system, paging announcements will not interrupt the white noise, ensuring your conversations always remain private.
